## **DETAILED ACTION**

### ***Terminal Disclaimer***

1. The terminal disclaimer filed on 1/26/07 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent No. 6,415,099; 6,400,408; and 6,473,128 has been reviewed and is accepted. The terminal disclaimer has been recorded.

### ***Allowable Subject Matter***

2. Claims 1,2&5-10 are allowable over the prior art of record.
3. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 1, the invention relates to a recording arrangement having receiving means for receiving a television signal and an information signal in which television program information can be transmitted, and having recording means for recording a processed received television signal of a television program, and having selection means for selecting at least one television program whose title information contained in the television program information contains at least one given keyword.

The closest reference Menard et al (US 6,061,056) disclose a system for automatically monitoring broadcasts, such as television broadcasts, and detecting content of particular interest to individual viewers.

However, Menard et al fail to explicitly disclose a recording arrangement, where the recording arrangement further comprises keyword detection means for detecting, as a detected keyword, at least one item of title fragment information of title information of a television program recorded by the recording means as a processed received television signal, the keyword detection means providing the at least one detected keyword to the selection means as the at least one given keyword.

### ***Conclusion***
